

TeamGriffin India

Team Griffin is VIT's aeromodelling club, where passion for flight takes off and transforms into cutting-edge drone technology. We are a team of enthusiastic students driven to push the boundaries of what's possible in the exciting world of drones.

Our mission is two-fold: to foster a vibrant community for drone enthusiasts within the college and to contribute meaningfully to the advancement of the national drone ecosystem. We achieve this through a multi-pronged approach, encompassing design, development, competition, and collaboration.

Team Griffin India participated in a national drone development competition. Three teams were put in. One team won overall AIR 3 and the second team won overall AIR 6 and AIR 2 in Design

Report. Recently we also conducted a drone building workshop in which students from VIT were taught how to build a drone from scratch.

We are an aeromodelling team. We all from the team love to build and fly drones and the very same passion brings us all together. It's more of a family than a team.
